<b>Semester</b>	<b>7<sup>th</sup> Semester</b>				
<b>Course Credit</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>T</b>	
	<b>3</b>	<b>1</b>	<b>-</b>	<b>4</b>	
<b>Prerequisites</b>	Network Security				
<b>Course Objectives</b>	<ol style="list-style-type: none"> <li>1. To understand basics of Cryptography and Network Security.</li> <li>2. To be able to secure a message over insecure channel by various means.</li> <li>3. To learn about how to maintain the Confidentiality, Integrity and Availability of a data.</li> <li>4. To understand various protocols for network security to protect against the threats in the networks.</li> </ol>				
<b>Course Contents</b>	<p><b>Unit-I</b> INTRODUCTION: OSI Security Architecture, Classical Encryption techniques, Cipher Principles, Data Encryption Standard – Block Cipher Design Principles and Modes of Operation - Evaluation criteria for AES – AES Cipher – Triple DES – Placement of Encryption Function – Traffic Confidentiality.</p> <p><b>Unit-II</b> PUBLIC KEY CRYPTOGRAPHY: Key Management - Diffie-Hellman key Exchange – Elliptic Curve Architecture and Cryptography - Introduction to Number Theory – Confidentiality using Symmetric Encryption – Public Key Cryptography and RSA.</p> <p><b>Unit-III</b> AUTHENTICATION AND HASH FUNCTION: Authentication requirements – Authentication functions Message Authentication Codes – Hash Functions – Security of Hash Functions and MACs, MD5 message Digest algorithm, Secure Hash Algorithm, RIPEMD, HMAC Digital Signatures, Authentication Protocols – Digital Signature Standard.</p> <p><b>Unit-IV</b> NETWORK SECURITY: Authentication Applications: Kerberos – X.509, Authentication Service, And Electronic Mail Security – PGP – S/MIME - IP Security – Web Security.</p> <p><b>Unit-V</b> SYSTEM LEVEL SECURITY: Intrusion detection – password management – Viruses and related Threats – Virus Counter measures – Firewall Design Principles – Trusted Systems.</p>				

<p><b>Course Outcomes</b></p>	<ol style="list-style-type: none"> <li>1. Provide security of the data over the network.</li> <li>2. Do research in the emerging areas of cryptography and network security.</li> <li>3. Implement various networking protocols.</li> <li>4. Protect any network from the threats in the world.</li> </ol>

<b>Course Credit</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>TC</b>	
	<b>3</b>	<b>1</b>	<b>-</b>	<b>4</b>	
<b>Prerequisites</b>	Cloud				
<b>Course Objectives</b>	<ol style="list-style-type: none"> <li>1. To understand the concept of cloud computing.</li> <li>2. To appreciate the evolution of cloud from the existing technologies.</li> <li>3. To have knowledge on the various issues in cloud computing.</li> <li>4. To be familiar with the lead players in cloud.</li> <li>5. To appreciate the emergence of cloud as the next generation computing paradigm.</li> </ol>				
<b>Course Contents</b>	<p><b>UNIT-I: Introduction:</b> Introduction to Cloud Computing, Definition of Cloud, Evolution of Cloud Computing, Underlying Principles of Parallel and Distributed Computing, Cloud Characteristics, Elasticity in Cloud – On-Demand Provisioning.</p> <p><b>UNIT-II: Cloud Enabling Technologies:</b> Service Oriented Architecture, REST and Systems of Systems, Web Services, Publish-Subscribe Model, Basics of Virtualization, Types of Virtualization, Implementation Levels of Virtualization, Virtualization Structures, Tools and Mechanisms, Virtualization of CPU, Memory, I/O Devices, Virtualization Support and Disaster Recovery.</p> <p><b>UNIT-III: Cloud Architecture, Services And Storage:</b> Layered Cloud Architecture Design, NIST Cloud Computing Reference Architecture, Public, Private and Hybrid Clouds, IaaS, PaaS, SaaS, Architectural Design Challenges, Cloud Storage, Storage-as-a-Service, Advantages of Cloud Storage, Cloud Storage Providers, S3.</p>				

	<p><b>UNIT-IV: Resource Management And Security In Cloud:</b> Inter Cloud Resource Management, Resource Provisioning and Resource Provisioning Methods, Global Exchange of Cloud Resources, Security Overview, Cloud Security Challenges, Software-as-a-Service Security, Security Governance, Virtual Machine Security, IAM, Security Standards.</p> <p><b>UNIT-V: Cloud Technologies And Advancements:</b> Hadoop, MapReduce, Virtual Box, Google App Engine, Programming Environment for Google App Engine, Open Stack, Federation in the Cloud, Four Levels of Federation, Federated Services and Applications, Future of Federation.</p>
<b>Course Outcomes</b>	<p>Upon completion of the course, it is expected that student will be able to:</p> <ol style="list-style-type: none"> <li>1. Articulate the main concepts, key technologies, strengths and limitations of cloud computing.</li> <li>2. Learn the key and enabling technologies that help in the development of cloud.</li> <li>3. Develop the ability to understand and use the architecture of compute and storage cloud, service and delivery models.</li> <li>4. Explain the core issues of cloud computing such as resource management and security.</li> <li>5. Evaluate and choose the appropriate technologies, algorithms and approaches for implementation and use of cloud.</li> </ol>
<b>Text Books</b>	<ol style="list-style-type: none"> <li>1. Distributed and Cloud Computing, From Parallel Processing to the Internet of Things, Kai Hwang, Geoffrey C. Fox, Jack G. <b>Semester</b>	<b>7<sup>th</sup> Semester</b>				
<b>Course Credit</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>TC</b>	
	-	-	4	2	
<b>Prerequisites</b>	Arduino				
<b>Course Objectives</b>	<ol style="list-style-type: none"> <li>1. Design and program IoT devices.</li> <li>2. Use real IoT protocols for communication.</li> <li>3. Secure the elements of an IoT device.</li> </ol>				
<b>Course Contents</b>	<ol style="list-style-type: none"> <li>1. Sense the Available Networks Using Arduino</li> <li>2. Measure the Distance Using Ultrasonic Sensor and Make Led Blink Using Arduino</li> <li>3. Detect the Vibration of an Object Using Arduino</li> <li>4. Connect with the Available Wi-Fi Using Arduino</li> <li>5. Sense a Finger When it is Placed on Board Using Arduino</li> <li>6. Temperature Notification Using Arduino</li> <li>7. LDR to Vary the Light Intensity of LED Using Arduino</li> <li>8. MySQL Database Installation in Raspberry Pi</li> <li>9. SQL Queries by Fetching Data from Database in Raspberry Pi</li> <li>10. Switch Light On and Off Based on the Input of User Using Raspberry Pi</li> </ol>				
<b>Course Outcomes</b>	<ol style="list-style-type: none"> <li>1. Able to understand the application areas of IOT .</li> <li>2. Able to realize the revolution of Internet in Mobile Devices, Cloud &amp; Sensor Networks.</li> <li>3. Able to understand building blocks of Internet of Things and characteristics</li> </ol>

<b>Course Title</b>	Mini Project				
<b>Course Code</b>	EBT04793				
<b>Semester</b>	7 <sup>th</sup> Semester				
<b>Course Credit</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>T C</b>	
	3	1	-	4	
<b>Prerequisites</b>	Learning				
<b>Course Objectives</b>	<ol style="list-style-type: none"> <li>1. To create an Industrial environment and culture within the institution.</li> <li>2. To set up production lab utilizing the infrastructure of the institution.</li> <li>3. To standardize laboratories to industrial standard, thereby giving exposure to industrial housekeeping standards.</li> <li>4. To provide students hands on experience on, troubleshooting, maintenance, fabrication, innovation, record keeping, documentation etc thereby enhancing the skill and competency part of technical education.</li> <li>5. To promote the concept of entrepreneurship.</li> </ol>				
<b>Course Contents</b>	<ol style="list-style-type: none"> <li>1. A mini project requires comparatively less time than major projects. They are comparatively simpler and have shorter duration. Mini Project helps students to explore and strengthen the understanding of fundamentals through practical application of theoretical concepts.</li> <li>2. Mini Project can help them to boost their skills and widen their horizon of thinking. It will act like a beginners guide to undertake the major project/dissertation during the final year and will ensure preparedness of students to undertake major projects/dissertation.</li> <li>3. Students will be required to select the topic relevant to their specialization and that has value addition. Students will get an opportunity to work in actual industrial environment if they opt for internship. Based on the selected topic student will also prepare seminar report based on the literature survey Mini Project will have mid semester presentation and end semester presentation. Mid semester presentation will include identification of the problem based on the literature review on the topic referring to latest literature available. End semester presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining solutions highlighting individuals' contribution. Continuous assessment of Mini Project at Mid Sem and End Sem will be monitored by the departmental committee.</li> </ol>				

<b>Course Outcomes</b>	<p>In this course the students will learn how to design and develop software, and to manage projects, using the following principles:</p> <ol style="list-style-type: none"><li>1. Identify engineering problems reviewing available literature.</li><li>2. Study different techniques used to analyze complex systems.</li><li>3. Solve a live problem using software/analytical/computational tools and present solution by using his/her technique applying engineering principles.</li><li>4. Learn to write technical reports and develop skills to present and defend their work in front of technically qualified audience.</li></ol>
